Build a transactional SAP Fiori app with RAP

Travel list report app → Object page

The screenshot displays the SAP Fiori Travel Object page in a 'Draft' state. The page is divided into a header section and a main content area. The header section includes a 'Travel' title and a bar with buttons for 'Edit', 'Delete', 'Deduct Discount', 'Accept Travel', 'Reject Travel', and a share icon. The main content area is titled 'Travel' and contains a form with the following fields:

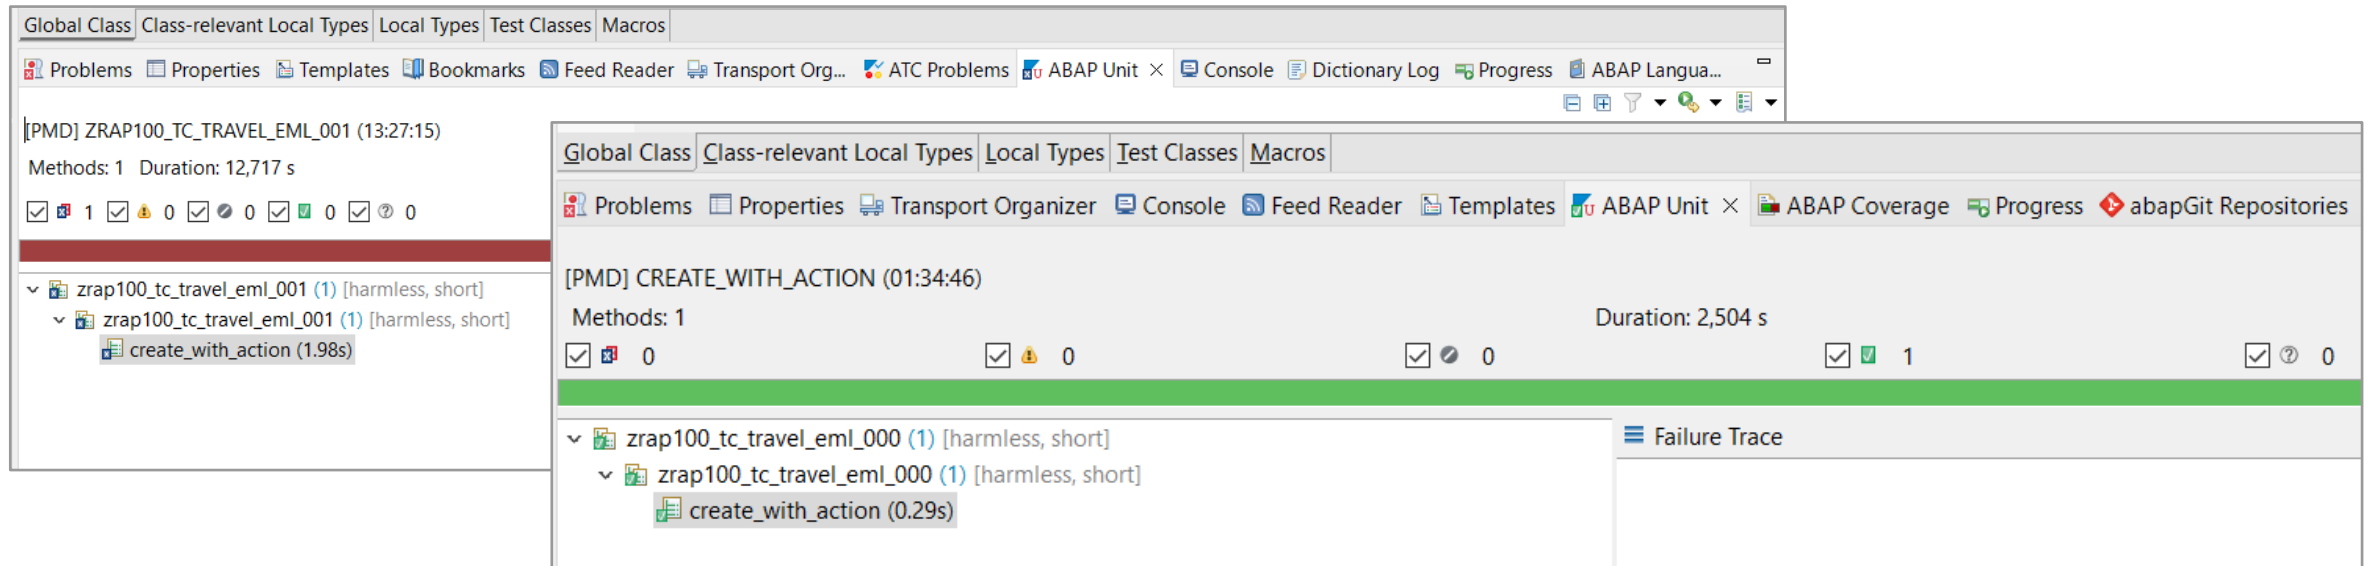

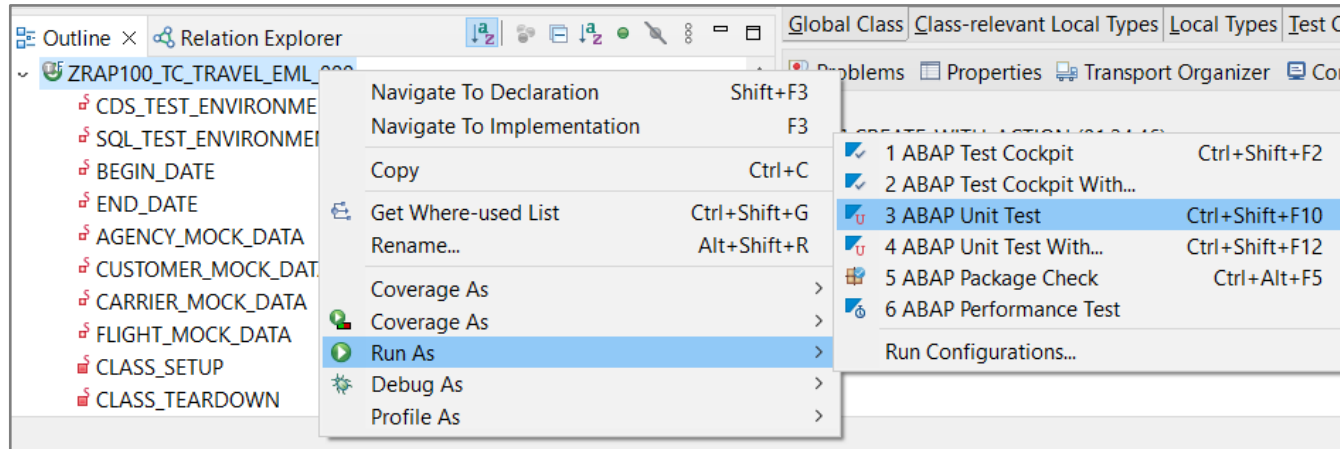

- Travel ID:** 4
- Agency ID:** The Ultimate Answer (70042)
- Customer ID:** Madeira (665)
- End Date:** Dec 11, 2022
- Booking Fee:** 40.00 USD
- Total Price:** 1,871.00 USD
- Starting Date:** Feb 12, 2022
- Description:** Vacation to Berlin
- Overall Status:** Open
- Attachment:** 281457_Collaborate4_R_blue.png

Callouts highlight the following elements:

- Edit, Delete, Actions:** Points to the header bar containing the 'Edit', 'Delete', 'Deduct Discount', 'Accept Travel', 'Reject Travel', and share icons.
- Draft:** Points to the 'Draft' status indicator in the top right corner of the main content area.
- Upload, Delete:** Points to the attachment area showing the file '281457_Collaborate4_R_blue.png' with upload and delete icons.

Optional: Write an ABAP unit test for a RAP business object

Unit test runs

Build and test a transactional SAP Fiori app with RAP

Underlying simplified Flight data model

A **Travel entity** defines general travel data, such as the agency ID or customer ID, the overall status of the travel booking.

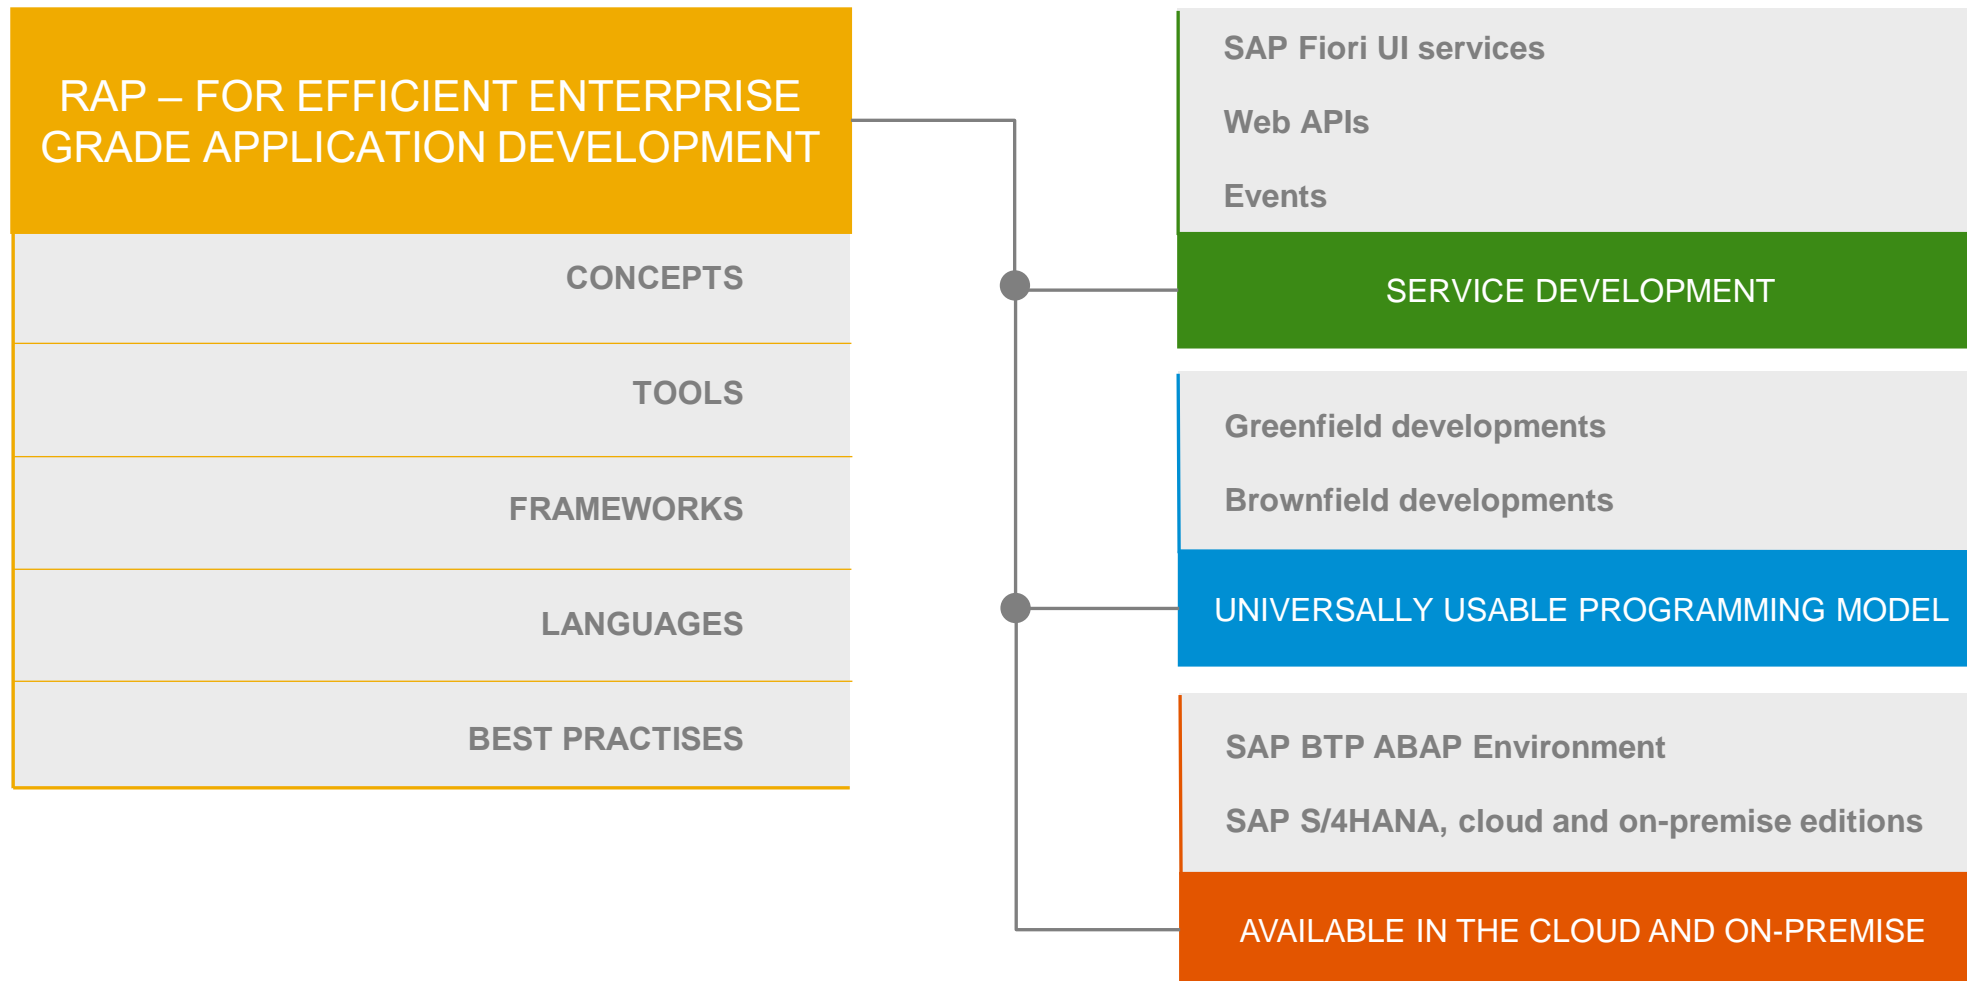

A **Customer entity** provides a detailed description of a flight customer, or passenger, such as the name, the address, and contact data.

An **Agency entity** defines travel agency data, such as the address and contact data.

INTRODUCTION TO RAP

ABAP RESTful Application Programming Model (RAP) – At a glance

The key players

ABAP Development Tools in Eclipse for all development tasks

Easy developer onboarding
End-to-end development flow

Languages: ABAP and Core Data Services (CDS)

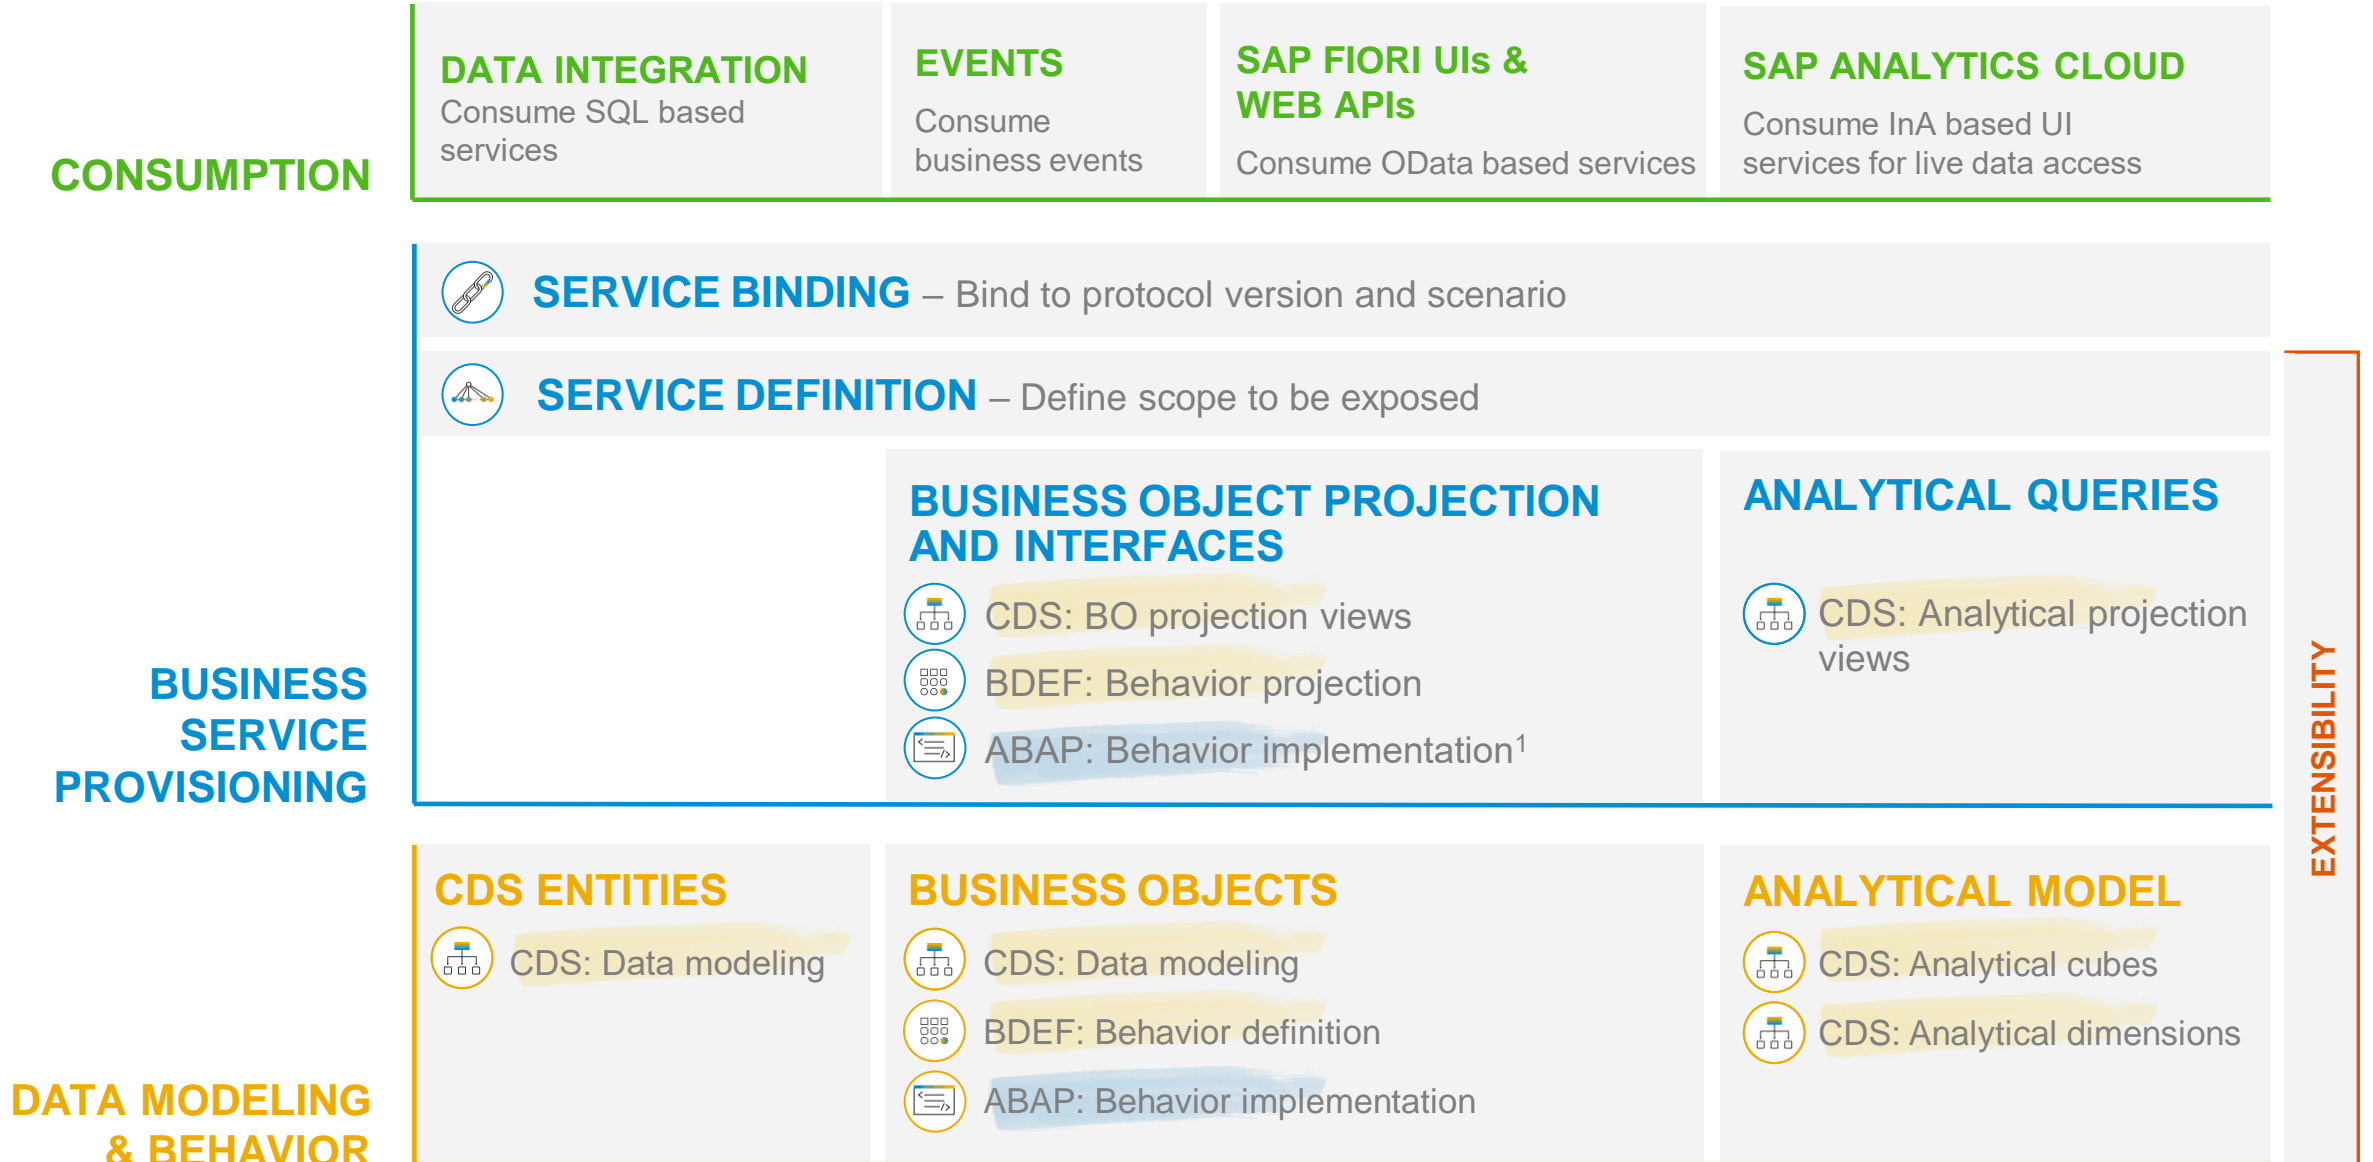

Standard implementation tasks via typed APIs supporting
static code checks, auto-completion, element info

Powerful frameworks

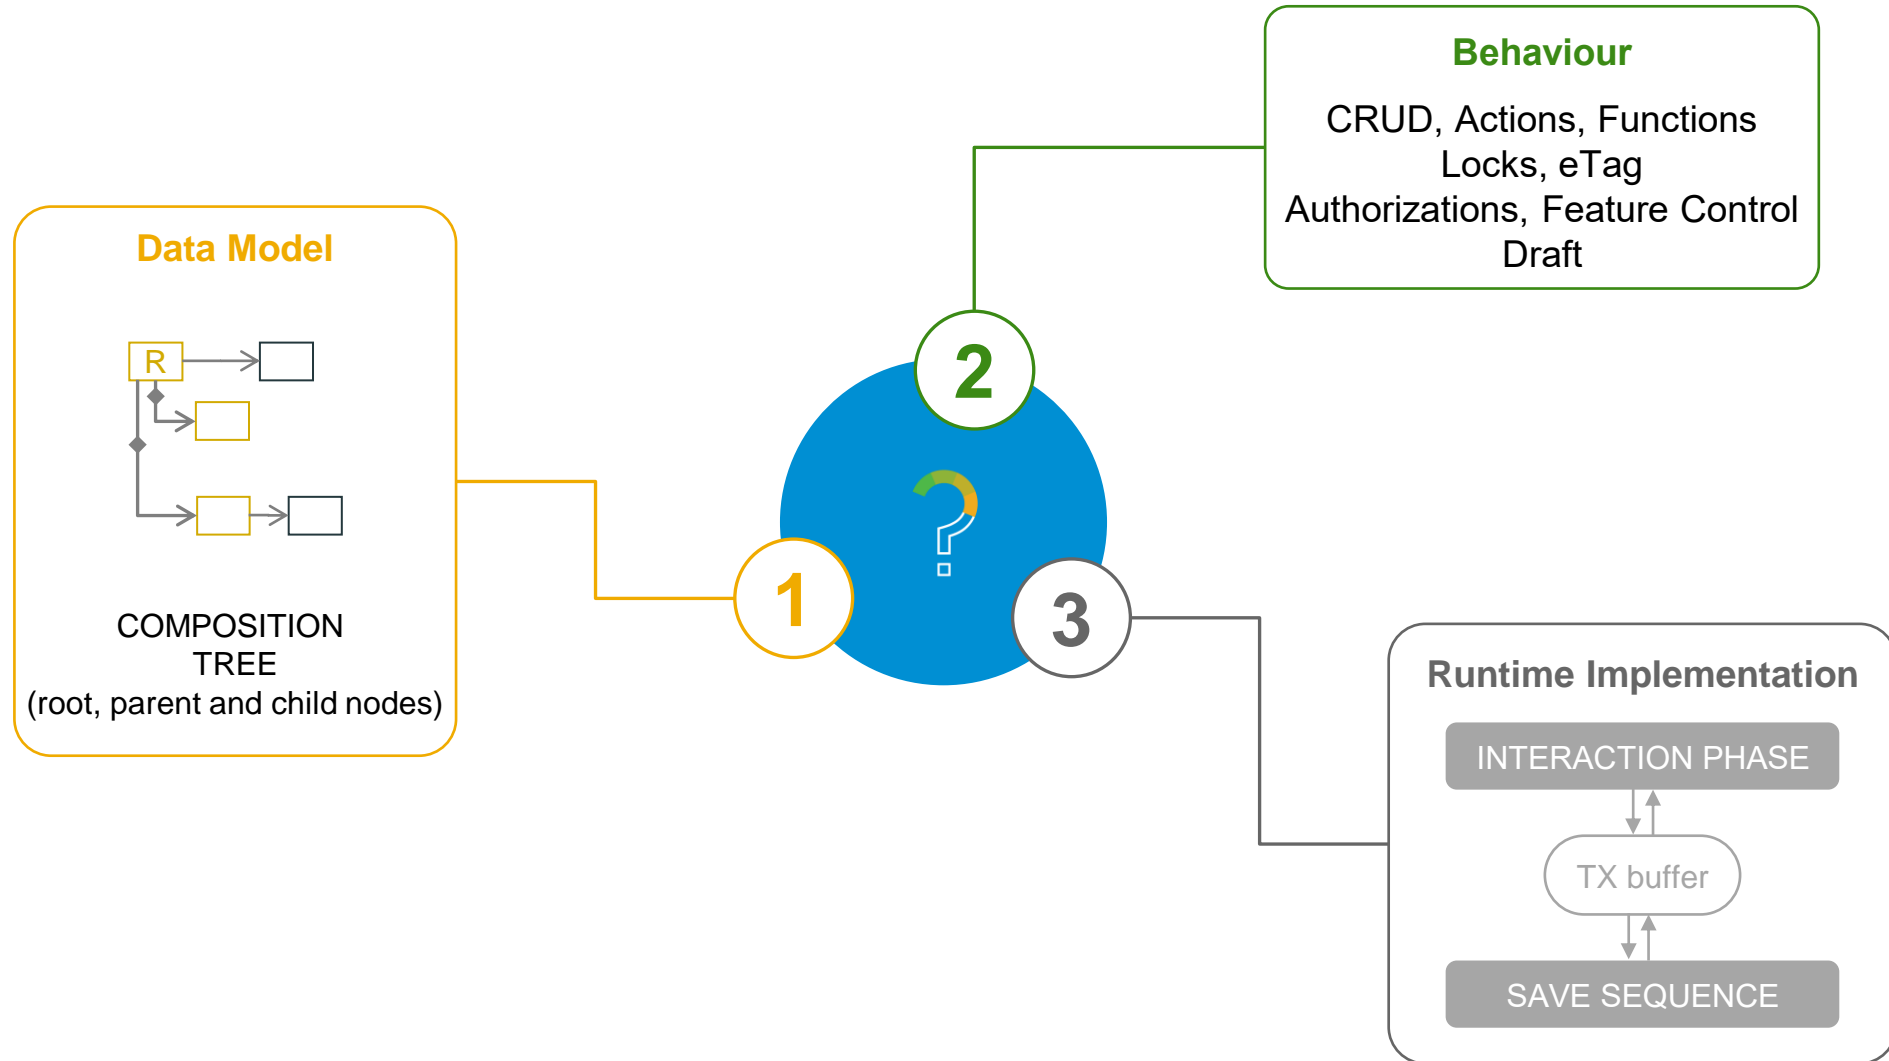

Take over technical implementation tasks
Business logic added in code exits on protocol-agnostic layers

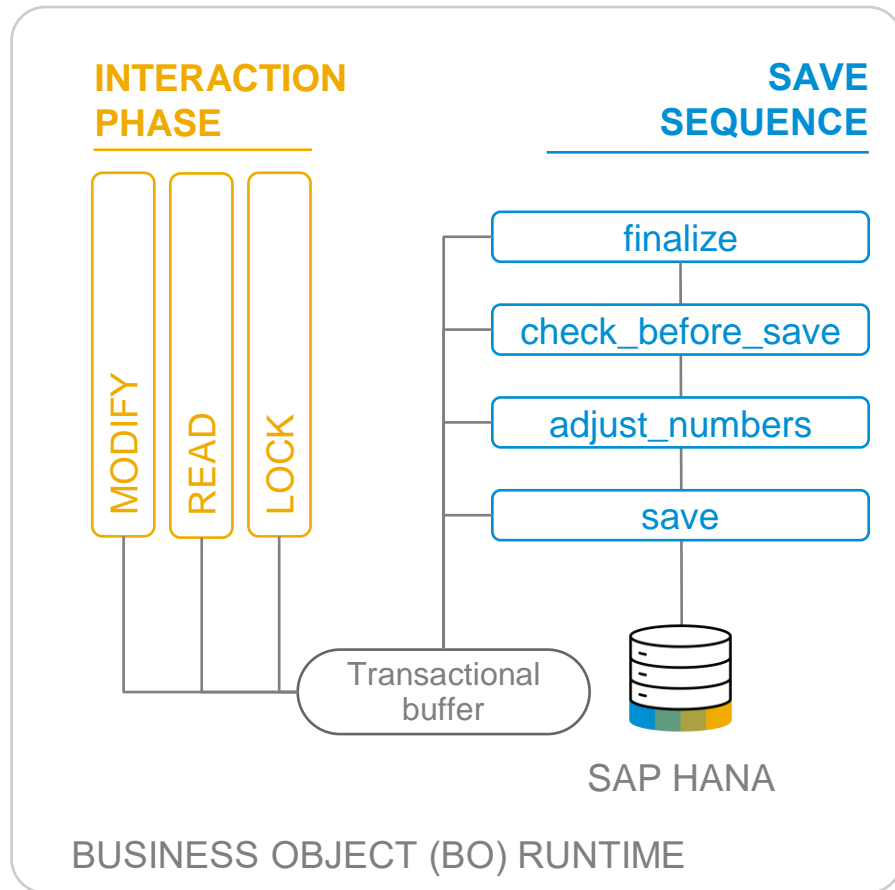

ABAP RESTful Application Programming Model (RAP) – The big picture

Business object

Business object runtime implementation types

UNMANAGED

For **brownfield developments** with available application code for interaction phase, transactional buffer, and save sequence

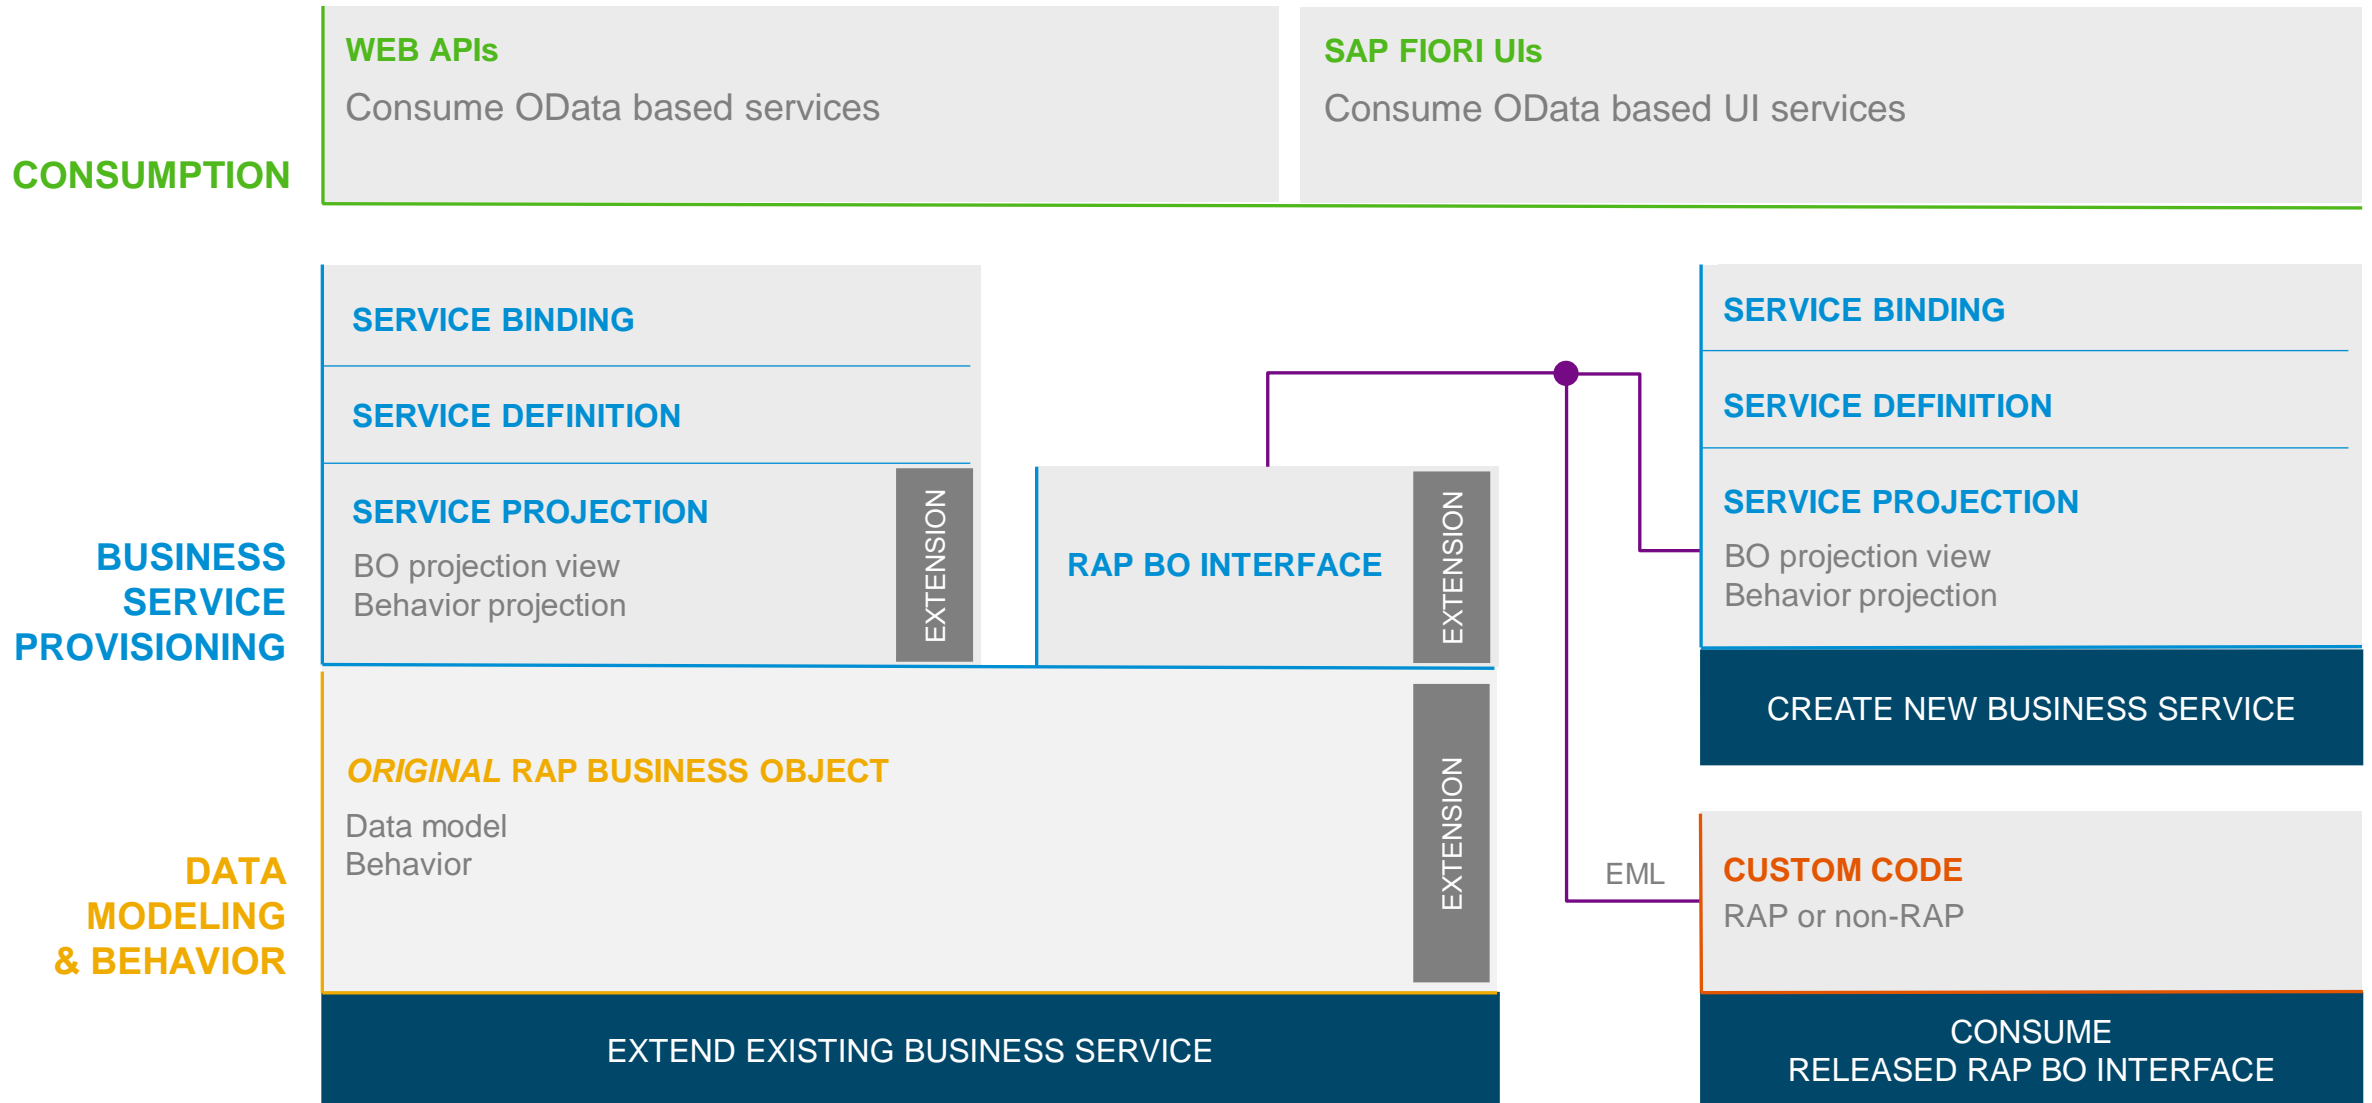

- ➔ Developers in charge of BO runtime: CRUD operations
- ➔ Adapters needed to integrate the existing code

MANAGED

For **greenfield developments** with standard implementation (opt. unmanaged appl. components: DB tables, lock/PFCG object, update task FM)

- ➔ Standard CRUD operations work out of the box
- ➔ Developers add BO specific business logic

Developer extensibility with RAP

TODAY'S SCENARIO – EXERCISES

The DT281 hands-on exercises

Access the exercises on GitHub: https://bit.ly/sap_teched2022_dt281

PRE-REQUISITES

- Set up and connect your ABAP Development Tools for Eclipse to the ABAP environment

Create the Database Table and Generate the UI Service

Enhance the BO Data Model & Enable OData Streams

Enhance the BO Behavior – Early Numbering

Enhance the BO Behavior – Determinations

Enhance the BO Behavior – Validations

Enhance the BO Behavior – Actions

Enhance the BO Behavior – Dynamic Feature Control *(optional)*

Write an ABAP Unit Test for the RAP BO *(optional)*

External API-based Access to the RAP BO with EML *(explore)*

DEMO

SUMMARY

Wrap up – Key takeaways

The **ABAP RESTful Application Programming Model (RAP)** helps to efficiently and rapidly build enterprise-grade services with intrinsic built-in cloud qualities

RAP best support **SAP HANA** and **SAP Fiori elements**

RAP is **available** on **SAP BTP ABAP Environment**, **SAP S/4HANA Cloud**, and **SAP S/4HANA** starting with edition 1909

The RAP **feature scope** is enhanced **quarterly** on SAP BTP ABAP Environment, **bi-yearly** on SAP S/4HANA Cloud, public edition, and **yearly** on SAP S/4HANA and SAP S/4HANA Cloud, private edition.

What's New in RAP: [SAP BTP](#) | [SAP S/4HANA](#) | [SAP S/4HANA Cloud](#)

Take a look at the [interactive SAP Road Map Explorer](#) for updates.

Major RAP enhancements¹ in 2022

ENHANCED BASE BUSINESS OBJECT LAYER

- ❖ Unmanaged internal early numbering for managed and unmanaged BOs
- ❖ Late numbering now also supported for managed BOs
- ❖ Instance factory actions for managed BOs to model actions that create new instances based on an input instance
- ❖ Use of client-independent tables as data sources for managed BOs with draft capabilities

WORKING WITH LARGE OBJECTS

- ❖ OData-based services built with RAP now support streams
- ❖ Option to incorporate external binary files or text files can be offered to end users in Fiori elements based apps

STABLE CONSUMPTION LAYER VIA BO INTERFACES ([link](#))

- ❖ A BO Interface offers an additional abstraction layer on top of a base RAP BO
- ❖ Can be defined using the BO view provider contract `transactional_interface` and the behavior implementation type `interface`
- ❖ Can be consumed via EML or via business services

¹ Also available on-premise starting with [ABAP Platform for SAP S/4HANA 2022](#)

Major RAP enhancements¹ in 2022 (2)

DEVELOPER EXTENSIBILITY FOR RAP BUSINESS OBJECTS ([link](#))

- ❖ Enable the extensibility of your RAP BO with fine-granular control over the extension points
- ❖ Build upgrade-safe and lifecycle-stable extensions using well-defined extension anchors of the original RAP BO

INTEGRATION OF BUSINESS EVENTS ([link](#))

- ❖ Define and raise business events in RAP BOs and RAP BO behavior extension; Exposure fully integrated in RAP
- ❖ Events from SAP Event Mesh on SAP BTP are consumed in RAP BOs using the Event Consumption Model

ADT WIZARD FOR END-2-END GENERATION OF SERVICES

- ❖ Generation of all required artifacts: Data model, basic BO behavior, and business service
- ❖ Generation of OData V4 based UI services and Web APIs currently supported

INTEGRATION OF READ ACCESS LOGGING (RAL)

- ❖ To monitor and log all database read accesses performed within your RAP services

¹ Also available on-premise starting with [ABAP Platform for SAP S/4HANA 2022](#)

Guidance for RAP usage in SAP S/4HANA

SAP S/4HANA
1909

FIRST RAP DELIVERY WITH LIMITED FEATURE SET

Managed scenario for greenfield development not supported

No draft support for SAP Fiori development

GUIDANCE

Delivery with SAP S/4HANA 1909

⇒ Use the *ABAP Programming Model for SAP Fiori*

SAP S/4HANA
2020

BASIC RAP DELIVERY

Incl. **managed** scenario (*with major limitations regarding key layout and numbering*)

Draft support for managed or unmanaged BOs to build transactional SAP Fiori apps

OData V4 support for Web APIs and SAP Fiori UIs with FPS01

GUIDANCE

If limitations are crucial

⇒ Use the *ABAP Programming Model for SAP Fiori*

If limitations are not critical

⇒ Use RAP

SAP S/4HANA
≥ 2021

MASS ADOPTION READY RAP DELIVERY

Managed scenario now supports various key layouts

Late numbering for a managed BO (with or without draft)

Enhanced testability, documentability and supportability support

Extensibility options, easy **business events** exposure, and other enhancements delivered with edition 2022

GUIDANCE

⇒ Exclusively use RAP

Sample implementations with the ABAP Flight Reference Scenario

The screenshot displays the SAP Help Portal interface. The left sidebar shows a navigation tree under 'ABAP RESTful Application Programming Model'. The 'Download the ABAP Flight Reference Scenario' link is highlighted. The main content area is titled 'Sample Services' and describes the development guides for the ABAP RESTful Application Programming model. It mentions that the guides are based on sample data from the ABAP Flight Reference Scenario and that a demo package with development objects is available. Below this, it lists the following demo scenarios available for use:

- Developing Read-Only List Reporting Apps in the package /DMO/FLIGHT_READONLY
- Developing Unmanaged Transactional Apps in the package /DMO/FLIGHT_UNMANAGED
- Developing Managed Transactional Apps in the package /DMO/FLIGHT_MANAGED
- Developing Transactional Apps with Draft Capabilities in the package /DMO/FLIGHT_DRAFT

The section 'Legacy Coding' follows, explaining that the reference scenario includes legacy coding based on function modules and exemplifies legacy applications that can be included in new ABAP code. A dropdown menu is open, showing a list of sample implementations:

- /DMO/FLIGHT (332) Flight Reference Scenario
- > /DMO/FLIGHT_DRAFT (52) Flight Reference Scenario: Draft Guide
- > /DMO/FLIGHT_LEGACY (128) Flight Reference Scenario: Legacy Objects
- > /DMO/FLIGHT_MANAGED (46) Flight Reference Scenario: TX managed E2E Guide
- > /DMO/FLIGHT_READONLY (7) Flight Reference Scenario: Read-Only E2E Guide
- > /DMO/FLIGHT_REUSE (69) Flight Reference Scenario: Reused Entities
- > /DMO/FLIGHT_UNMANAGED (30) Flight Reference Scenario: TX unmanaged E2E Guide

Demonstrate how to use different RAP capabilities concretely

Based on a simple to use and understand data model: SFLIGHT reloaded

Feature scope regularly enhanced
